We now have available the rapid AflaCHECK test kits. They work the same way as the DONCheck strips providing a great rapid review on the risks you may be facing. Both these tests are qualitative not quantitative like HPLC/Eliza however the exciting news is that the availability of very cost effective equipment to provide a quantitative analysis is just around the corner. More on that VERY soon!

VICAM's AflaCHECK is a qualitative one-step test kit for the detection of aflatoxin. Aflatoxin is a Group 1 carcinogen proven to cause cancer in humans. In the United States and abroad, aflatoxin levels in food and grain are subject to strict regulations. AflaCHECK uses highly specific reactions between antibodies and aflatoxin to detect aflatoxin in a variety of samples. The test strips can be used to detect the presence of aflatoxin at two different cutoff levels: 10 ppb or 20 ppb, depending on the protocol followed.

### BENEFITS

- Fast** : Results in as little as 3 minutes
- Simple** : No special training or equipment required
- Durable** : Long shelf life, no refrigeration required
- Economical** : Inexpensive first step in your testing protocol
- Versatile** : Choice to two cutoff procedures; 10 ppb and 20 ppb
